Machine-learning engineer and researcher: deep learning, foundation-model adaptation, and agentic AI — from research method to deployed, benchmarked system.

Profile

Machine-learning researcher and engineer working on deep learning, foundation-model post-training, and agentic / multi-agent systems. I design conceptual frameworks and turn them into working, deployed, rigorously evaluated systems.

Technical Skills

Deep learning	PyTorch (CNNs, autoencoders, attention / transformers); representation learning
Foundation models	Fine-tuning / adaptation (LoRA); knowledge distillation; evaluation and benchmarking pipelines
Agentic AI	Multi-agent orchestration; RAG and reasoning pipelines; tool / LLM / oracle delegation; evidence and grounding mechanisms
Training infrastructure	GPU training; SLURM clusters; Ray, Dask; Docker, Kubernetes; FastAPI
Programming	Python (primary) & PyTorch, Rust, TypeScript, SQL, Bash

Experience

2021–present	Independent ML Researcher & Engineer, Bitspark GmbH Designed and built agentic / multi-agent systems, foundation-model adaptation, and ML pipelines; from concept to deployed, documented, benchmarked tools.
2019–2021	Computational Science — ML & HPC, Technische Universität München, Munich Deep-learning pipelines (PyTorch, CNNs) at HPC scale; SLURM clusters; statistical evaluation and benchmarking of >100 GB datasets. Taught at Master's level.

Selected Projects

kwasa-kwasa / Turbulance	Declarative agentic-orchestration language: multi-agent, multi-substrate delegation (LLM oracles, tools, Python), confidence/argumentation semantics, and grounding of generated values. Rust core + TypeScript; VSCode tooling incl. a language server. github.com/fullscreen-triangle/kwasa-kwasa
four-sided-triangle	8-stage metacognitive multi-agent RAG / reasoning pipeline; resource-aware orchestration; Rust core, FastAPI + Ray + Docker. github.com/fullscreen-triangle/four-sided-triangle
purpose	Rust CLI: an agent-queryable context-retrieval tool that cuts LLM token burn; trait-based architecture where hand-coded and LoRA-trained resolvers swap transparently. github.com/fullscreen-triangle/purpose

Foundation- LoRA fine-tuning and knowledge distillation; research on training methodology (curriculum design
model / inverse curricula).
adaptation

Education

2018–2019 **MSc Computational Biology**, *Universität Tübingen*

2014–2017 **MSc Pharmaceutical Biotechnology**, *HAW Hamburg*

2011–2014 **BSc Biochemistry and Cell Biology**, *Jacobs University Bremen*

Additional: doctoral research, computational lipidomics, TUM (not completed).
