Automation engineer: reproducible data and computational pipelines, workflow orchestration, and agentic multi-step automation — from script to deployed system.

Profile

I automate complex computational and scientific workflows end to end: reproducible data pipelines, distributed orchestration, code-generation tools, and agentic multi-agent systems that carry out multi-step tasks. From script to deployed, monitored system.

Technical Skills

Pipeline automation	Reproducible, automated data-processing pipelines (ingestion → processing → output); built-in validation and benchmarking
Workflow orchestration	Ray, Dask, SLURM; Docker, Kubernetes; FastAPI; distributed scheduling and execution
Agentic / task automation	Multi-agent orchestration; tool / LLM delegation; automated retrieval and reasoning pipelines
Code generation	Domain-specific languages and compilers that emit and run code in other languages (GLSL, JavaScript, Python)
Scripting / programming	Python (primary), Rust, Bash, TypeScript, SQL

Experience

2021–present	Independent Automation & Software Engineer, Bitspark GmbH Built automated pipelines, distributed orchestration systems, code-generation tools, and agentic task-automation systems; all deployed and documented.
2019–2021	Computational Science — Pipelines & HPC, Technische Universität München, Munich Automated high-throughput data pipelines at HPC scale; SLURM-based distributed execution; reproducible workflows over >100 GB datasets.
2017–2018	Data Pipeline Automation, Universitätsklinikum Hamburg-Eppendorf, Hamburg Automated LC-MS/MS and MALDI-TOF data-processing pipelines for high-throughput clinical instrument data.

Selected Projects

four-sided-triangle	Multi-agent system automating an 8-stage reasoning / RAG process with resource-aware orchestration; Rust core, FastAPI + Ray + Docker. github.com/fullscreen-triangle/four-sided-triangle
purpose	Rust CLI automating cross-project context retrieval for AI agents — cutting redundant work and cost. github.com/fullscreen-triangle/purpose

kwasa-kwasa A language whose compiler automates generation of code in other languages (GLSL, JS, Python).
github.com/fullscreen-triangle/kwasa-kwasa

lavoisier Automated, distributed mass-spectrometry pipeline; 98.9% NIST accuracy.
lavoisier.vercel.app/sandbox

Education

2018–2019 **MSc Computational Biology**, *Universität Tübingen*
2014–2017 **MSc Pharmaceutical Biotechnology**, *HAW Hamburg*
2011–2014 **BSc Biochemistry and Cell Biology**, *Jacobs University Bremen*
Additional: doctoral research, computational lipidomics, TUM (not completed).
